

The overuse of Copper Sulphate and Formaldehyde in animal footbaths is hazardous to human health and the environment.

Healthy Hooves® is patented in the USA as a safe acid solution that solubilises Copper and Zinc sulphate with additional additives to assist in cleansing of the hooves and can be used in animal footbaths.

Healthy Hooves® contains a buffering system that provides a consistently effective footbath life throughout the processing of 400/500 cows. (Using a 200 litre footbath)

Key Benefits of using Healthy Hooves

- Safer than formalin
- Lowers pH in the footbath
- More cow passes per footbath
- Longlasting, effective in use solution
- Can be used with auto dosing and spray systems.

Healthy Hooves®

Solutions for Footbaths

ULTIMATE

Simply Follow These Instructions

USE AT 4% IN WATER

For the first 3 weeks footbath twice a day
five days per week

Ongoing

USE AT 2% IN WATER

Twice a day - Three days per week

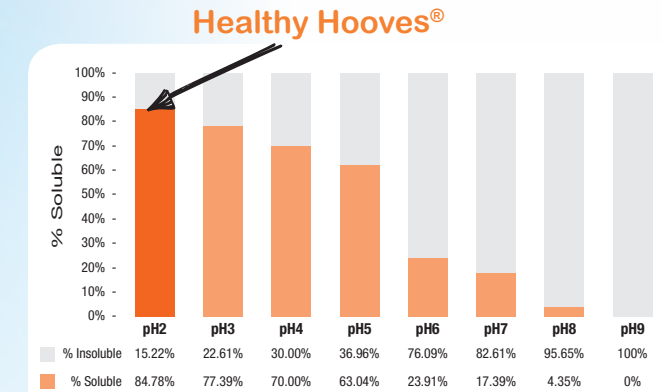

= 400/500 Cow Passes

for a 200 litre footbath

*Ultimate Solutions
for Footbaths*

For optimum results footbath am/pm 3 times a week.
*Data on File

Copper Sulphate Solubility Chart*

Copper Sulphate* solubility at
pH6 is 24%

Copper Sulphate* solubility at
pH2 is 85%

pH2 is achieved when **Healthy Hooves®**
is added to water at 2%

Saves Money as less **Copper Sulphate*** is used with additional benefits

Reduce the **COST** of Hoof care and **INCREASE** milk yield!

* Zinc Sulphate - Using Healthy Hooves will provide the same benefits of increased solubility where Zinc Sulphate is used.
